## Company profile

Founded in 1991, Nanfang Zhongjin Environment Co.,Ltd. (hereinafter referred to as CNP) has been listed on the Shenzhen Stock Exchange on 9th December 2010; Stock name: CNP; Stock code: 300145.

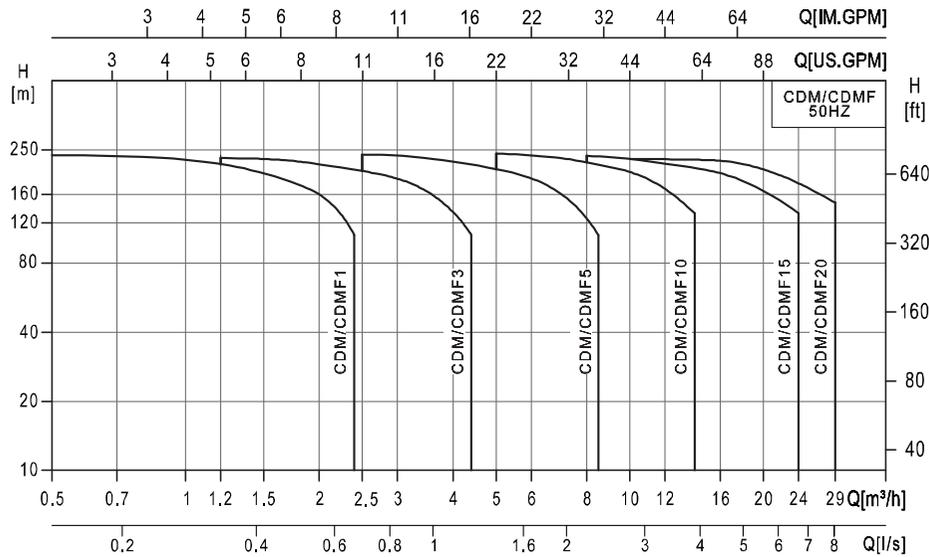

As the first enterprise specializing in the research and large-scale production of stainless steel stamping welded centrifugal pump in China, CNP is currently the professional manufacturer with the highest volume of production and marketing in that industry. It ranks first in the country in terms of product scope, sales volume, and production quality. The company has set up a complete network of marketing services to meet the requirements of overseas markets as well as domestic needs. The products have seen a wide range of application in the area of pressurization, industry, living water, cycling of air-conditioning water, heat supply, fire extinguishing system, pumping of underground water, treatment of sewage and waste water, chemical industry and desalination of sea water etc.

CNP has now entered into the fast track of development and has taken a major step forward in forging China Strong Pump Enterprise and World's famous brand in the Pump Industry. In order to better meet the client's needs and requirements for expansion, it has set up a wide network of selling and service, as well as offices and service centers in major cities in China, which are aimed at providing timely and effective services for our clients. Meanwhile, our company has successfully penetrated into the world market by forging a good business relationship with more than 50 countries and regions in the Europe, Northern American, and Southeast Asia etc.

## Summary

CDM/CDMF pumps are new generation, high efficiency, non-self-priming vertical multistage centrifugal pumps (Abbr. as pumps). It referred to European standard, adopted entirely new industrial design, efficiency achieved  $MEI \geq 0.7$ . It is energy saving, low noise, environment friendly, compact design, beautiful shape, light weight, easy for service, high reliability.

## Motor

Totally enclosed, fan cooled, 2 pole standard motor

Protection Class: IP55

Insulation class: F

Voltage: 50Hz: 1×220-230/240V

3×200-220/346-380V

3×220-240/380-415V

## Working conditions

Thin, clean, non-flammable, non-explosive, solid free, fiber free, physically and chemically water-like liquid.

Liquid temperature:

Normal temperature type: -15°C to 70°C

Hot water type: -15°C to 120°C

Ambient temperature: up to +40°C

Altitude: up to 1000m

## Applications

CDM/CDMF pumps are designed for a variety of applications from the pumping of potable water to the pumping of industrial liquids. Applied for liquids of different temperature, different rated flow, different pressure range. CDM is suitable for non-corrosive liquid, CDMF is suitable for light corrosive liquid.

**Boosting:** Filtering and transferring water in water factories, delivering water in different zone, pressurizing for major pipelines, boosting for high buildings.

**Industrial boosting:** process water system, cleaning system, high pressure washing system, fire-fighting system.

**Industrial liquid conveying:** cooling and air conditioning systems, boiler feed and condensate systems, machine matching, acid and alkali.

HVAC: Air conditioning system

**Water treatment:** Ultrafiltration system, R/O system, distillation system, separator, swimming pool.

## Performance curve

Following conditions are suitable for the performance curves shown below.

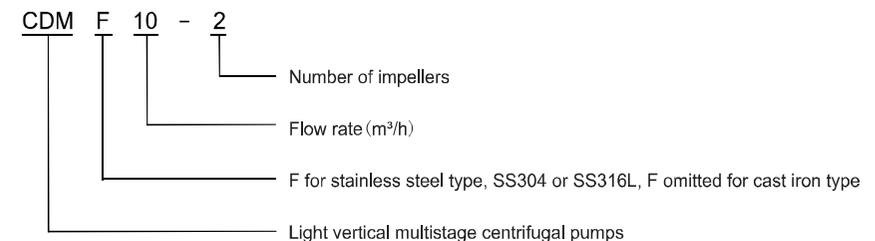

1. All curves are based on the measured values of 50Hz: constant motor speed 2900rpm.

2. Curve tolerance in conformity to ISO9906:2012 Grade 3B.

3. Measurement is done with 20°C air-free water, kinematic viscosity of 1 mm²/sec.

4. The operation of pump shall refer to the performance region indicated by the thickened curve to prevent overheating due to too small flow rate or overload of motor due to too large flow rate.

## Model definition

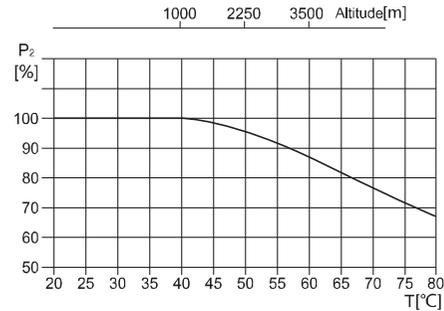

## Max. working pressure

Model	Max working(bar)
CDM/CDMF1,3,5,10,15,20 Flange, cutting ferrule, pipe thread	25
CDM/CDMF1,3,5,10 oval flange	16

## Max. ambient temperature, altitude above sea level

When pumps working in the condition of higher than 40°C or higher than 1000m altitude, because the air density lessened, cooling performance is reduced, motor output power  $P_2$  is reduced also. The motor power shall be enlarged in those working conditions.

## Min. inlet pressure

In case that the pressure in pump is lower than the steam pressure used to convey liquid, the cavitations will occur. To avoid cavitations, a minimum pressure at the inlet side of the pump shall be guaranteed. The maximum suction stroke can be calculated with following formula:

$$H = P_b \times 10.2 - NPSH - H_f - H_v - H_s$$

$P_b$  = Barometric pressure in bar.

(Barometric pressure can be set to 1 bar).

In a closed system,  $P_b$  means system pressure [bar].

NPSH = Net Positive Suction Head [m].

(It can be read from the point of possible max. flow rate shown on NPSH curve.)

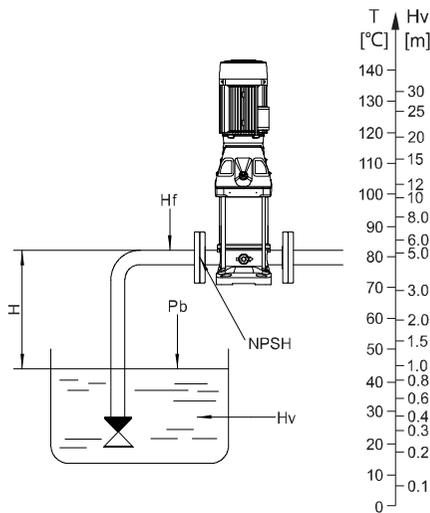

$H_f$  = Pipe friction loss at the inlet [m].

$H_v$  = Vapour pressure [m].

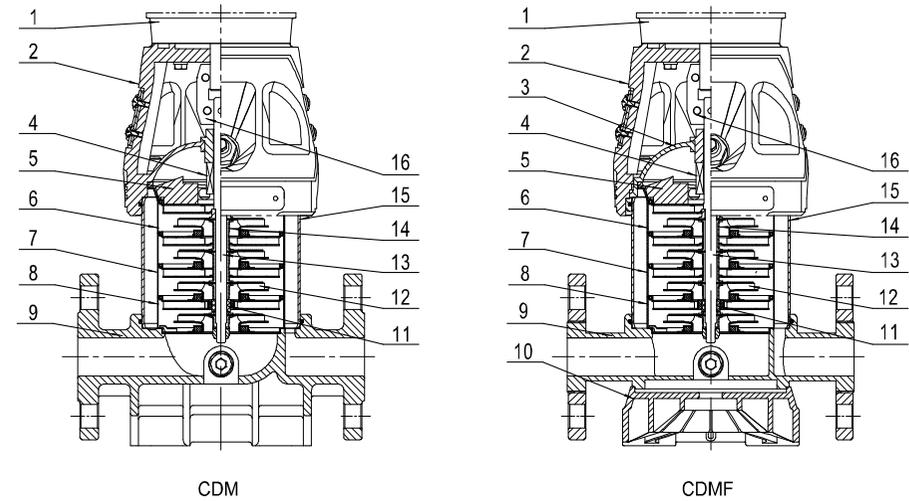

$H_s$  = Safety margin = minimum 0.5 meters head.

If the "H" calculated is positive, the pump may run under the max. suction stroke H.

If the "H" calculated is negative, A head of minimum inlet pressure H is required.
