Pumping Water Pumping Honor

## Company profile

Nanfang Pump Industry Co.,Ltd (CNP),as a subsidiary of Nanfang Zhongjin Environment Co.,Ltd, was founded in 1991, and listed on Shenzhen Stock Exchange on December 9,2010 with stock code 300145.

In 2019, CNP's annual output exceeded 900,000 units/set with nearly 3 billion sales revenue, continuing to maintain high growth.

As a national enterprise technology center, CNP has flagship ultra-high efficient product -new generation CDM (F) light vertical multistage centrifugal pump,  $MEI \geq 0.7$ . Same series high temperature pump products are developed in 2019 to satisfy high temperature applications. All light stainless steel pump product series grow stably. Advanced frequency conversion water supply equipment has been innovated to the 6th generation. Fire pump and diesel engine have obtained UL certification.TD in-line pump, NIS/NISO end suction pump, NSC split casing pump, WQ sewage pump, PQ stainless steel fountain submersible pump, BP silent tube pump, pool pump, non-blocking self-priming sewage pump, metering pump, oil pump and other pump products, can meet various application needs of different fields.

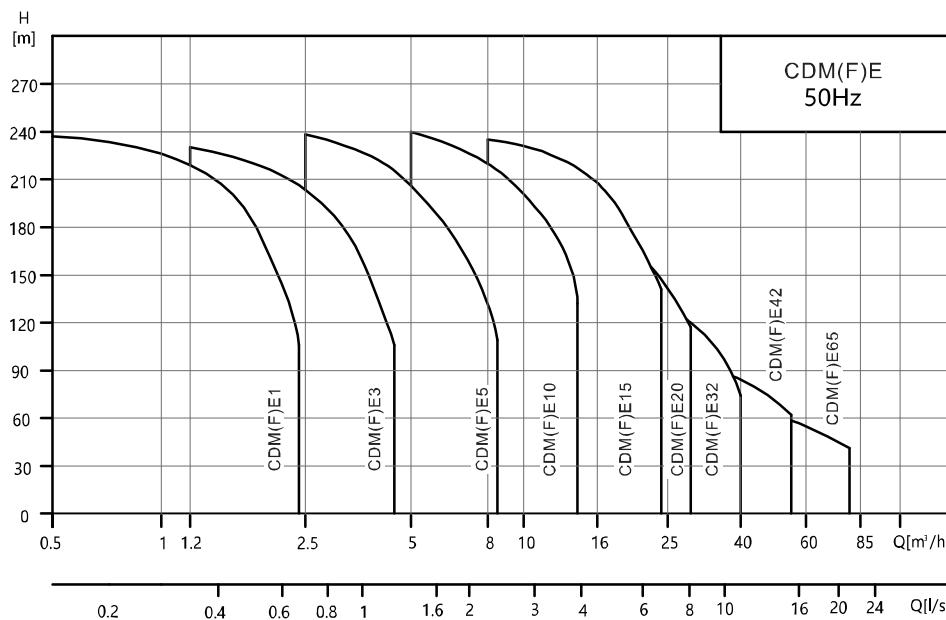

CNP has a complete sales network both in domestic and overseas market, exporting to over 60 countries and regions, maintaining long-term and strong relationship with our clients. CNP pumps have been widely applied in various fields like water treatment, water supply and drainage, HVAC, industrial application, seawater desalination, energy and power etc.

CNP, a green water expert beside you.

## Summary

CDM(F)E series vertical single-stage intelligent variable frequency pump (Hereafter as CDME/CDMFE series or pump) is equipped with intelligent variable frequency controller.

It can realize constant pressure, constant temperature, constant pressure difference and other smart control functions by connecting pressure and temperature sensor. CDME/CDMFE series are energy-saving, low noise, intelligent, environmental friendly with compact structure, beautiful appearance, high reliability, and easy maintenance convenience. Pressure or temperature sensors and other accessories are not in TDE factory configuration. Users need to configure it according to needs.

The top of TDE series is designed as a pull-out available form, which enables to repair the pump without affecting the pipeline system.

## Motor

TEFC motor, 2-pole standard, three-phase asynchronous motor;  
Protection class : IP55;  
Insulation class : F;  
Standard voltage : 50Hz 3×380V

## Variable frequency controller

Input power supply : 50Hz 3×380V  
Power range : 1.5kW~15kW  
Output frequency range : 30Hz~50Hz  
Pressure adjustment range : 0.1bar  
Protection class : IP55  
Display: LCD

## Application

CDME/CDMFE pumps are designed for a variety of applications from the pumping of potable water to the pumping of industrial liquids. Applied for liquids of different temperature, different rated flow, different pressure range. CDME is suitable for non-corrosive liquid, CDMFE is suitable for light corrosive liquid.

Boosting: Filtering and transferring water in water factories, delivering water in different zone, pressuring for major pipelines, boosting for high buildings

Pressuring: Water circulating system, washing system, high pressure flushing system, fire-fighting system

HVAC: Air condition system

## Curves conditions

The requirements apply to all the performance curve below:

- All curves are based on the measured value of motor at a constant speed of 2900rpm.
- Curve tolerance in conformity to S9906:2012, grade 3B.
- Measurement is done with 20°C air-free water, kinematic viscosity of 1mm²/s.
- The pump use should refer to the performance range of the bold curve to prevent overheating by too little flow or motor overload by excessive flow.

## Operating condition

This pump is applied for thin, clean, non-flammable, non-explosive, solid free, fiber free, physically and chemically water-like liquid.

Liquid temperature: Normal temp -15°C to 70°C;

Hot water type -15°C to 120°C;

Ambient temperature: up to 40°C

Altitude: up to 1000m

## Max.working pressure

Model	Max pressure
CDM(F)E1、3、5、10 Oval flange	16
CDMFE32、42	16(30)
CDMFE65	16(25)
CDM(F)E1、3、5、10、15、20 Flange、Cutting ferrule、Pipe thread	25
CDMFE32、42	25(30)
CDMFE65	25

Special order is required for pumps with pressure in brackets.

## Function and Features

Pump control mode and function can be realized by configuring the communication line between pressure/temperature sensors or controllers in pump, as follows:

- **Control mode:** Five control modes are set in controller: constant pressure mode, constant temperature mode, constant pressure difference mode, constant temperature difference mode and manual mode.
- **Constant pressure mode:** In operation, the pump will enter the shutdown sleep state when the outlet pipeline pressure reaches the set value; the pump will start to operate again when the pressure drops to a certain value.
- **Constant temperature mode:** In operation, the pump will enter the shutdown sleep state when temperature of the outlet pipeline medium reaches the set value; pump will start to operate again when the temperature drops to a certain value.
- **Constant pressure difference mode & Constant temperature difference mode:** When the pump is used for cooling water control, you can choose the constant pressure difference control mode or constant temperature difference control mode. When the inlet and outlet pressure or temperature difference value of cooling equipment reaches the set value, the pump will operate at the lower limit frequency.
- **Function protection:** The Controller is equipped with function protection of high pressure, low pressure, high temperature, low temperature, etc. When actual value exceeds the set value in controller detection system, the controller will send an alarm signal and stop pump from operation automatically.
- ★ **Manual mode:** Controller can make the pump run at the specified frequency by controlling pump start or pump stop and the operating frequency through manual mode.
- ★ **Electrical protection:** Controller is equipped with the protection of over-current, over-voltage, under-voltage, overload and default phase. Facing the electrical fault, the display screen will show the corresponding fault signal and stop the running pump automatically.
- ★ **Restart:** Controller has restart function. When power off in pump running suddenly, the pump will stop; when power on again, the controller can make the pump restart running.
- ★ **Frost proof:** Controller has frost proof function. When the pump is in sleep state, the controller can make pump to operate in low frequency for a period of time in a very low environment temperature condition in the winter to protect pump from being damaged by water freezing.
- ▲ **Multi-pump coordinated operation:** Controller can control the coordinated operation of pumps, achieving at most one main pump, five auxiliary pumps and six pumps coordinated operation for water supply. Various coordinated modes can be adopted to ensure the system's intelligent constant pressure, constant temperature and other water supply modes.
- ▲ **Coordinated mode:** Controller is provided with four coordinated modes: synchronous mode, master-slave mode, large-small pump mode and single-pump operation mode
- ▲ **Synchronous mode:** Main pump and auxiliary pumps operate at the same frequency state.
- ▲ **Master-slave mode:** Main pump is operated in frequency-modulated state, while the other auxiliary pumps are operated in full-frequency state.
- ▲ **Large -small pump mode:** Pump group adopts a small flow pump and multiple large flow pumps . When the system starts or restarts, the small pump is used to run first. When the flow cannot meet the system requirements, the small flow pump will stop and the large flow pump will start instead.
- ▲ **Single pump operation mode:** When the pump group is running, the system adopts a single pump running at any time.(Only applicable to two pumps currently)
- ▲ **Automatic main pump transfer function:** In pump group, when the main pump sensor fail and stop, controller chooses to designate a auxiliary pump as main pump to start and run with main pump functions.
- ▲ **Alternate run:** After pump runs continuously for a long time, alternate run function can be set in controller to balance the pump service life. Running main and auxiliary pumps can act as the main pump in turn according to alternate run time.

Note: Pressure or temperature sensor is required in functions with ● symbol; no requirement of a sensor in functions with ▲ symbol; configuration requirement of the sensor and 485 communication line connection in functions with ▲ symbol.

## Model definition

CDM(F)E1,3,5,10,15&20

CDM(F)E 10 - 2

Stage

Rated flow ( m<sup>3</sup>/h )

Vertical multistage intelligent variable frequency pump (F : Flow passage component : stainless steel 304 or 316L, general type omitted)

CDM(F)E32 , 42 , 65

CDM(F)E 32 - 3 - 2

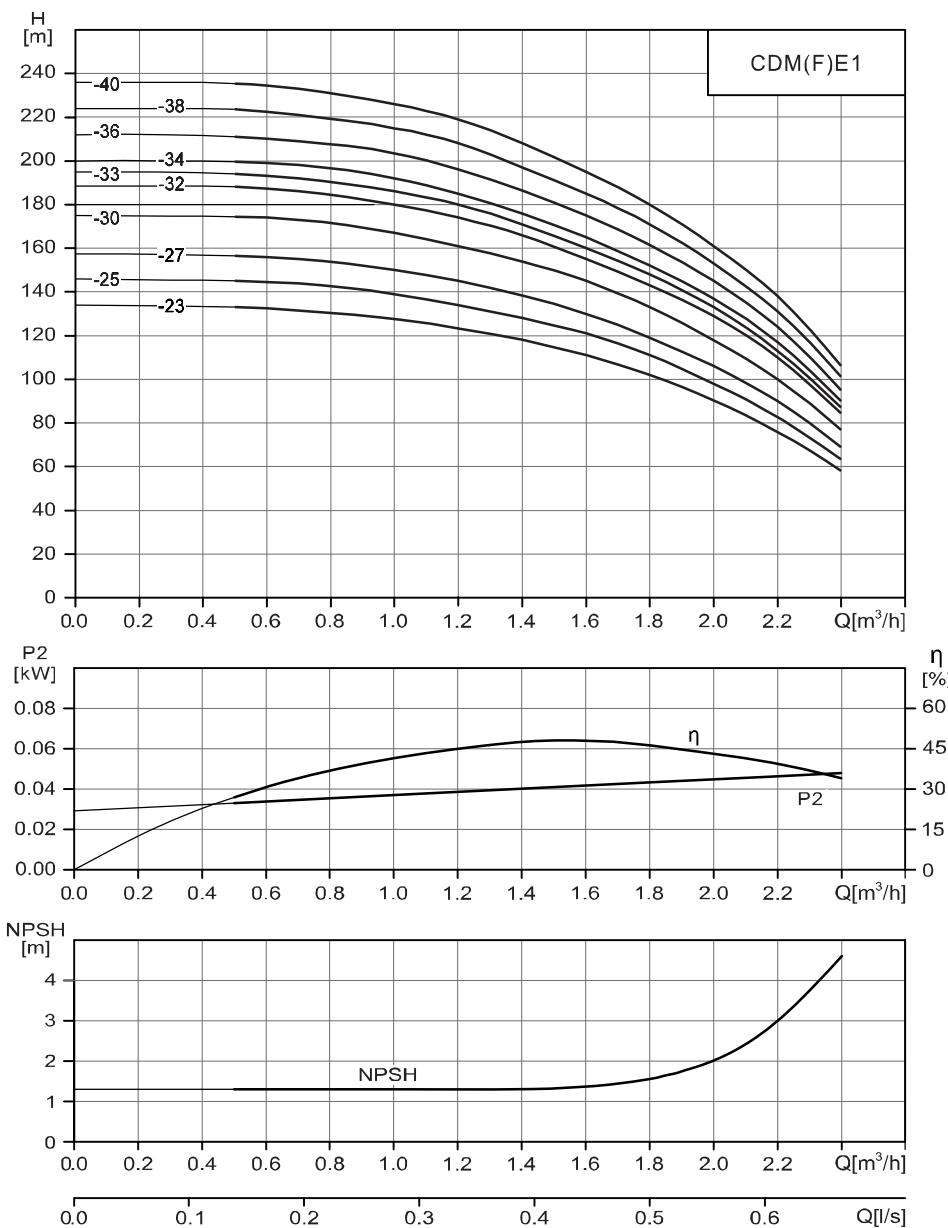

Small impeller number

Stage

Rated flow ( m<sup>3</sup>/h )

Vertical multistage intelligent variable frequency pump (F : Flow passage component : stainless steel 304 or 316L, general type omitted)
